Voluum Tuner Press Release

29 October 2015

## **Voluum — the world's first volume pedal with a built-in tuner**

Sonuus Limited is delighted to announce the availability of the world's first volume pedal with a built-in precision chromatic tuner. This has been achieved by using Sonuus' world-leading expertise in pitch-detection to add a high-performance tuner into the latest firmware of the Sonuus Voluum analogue effects pedal.

Volume pedals often have a tuner-output so you can conveniently tune when you turn down the volume. But these outputs usually leave the tuner in the signal chain at all times, which can degrade your tone. By combining the tuner into the Voluum, your tone doesn't suffer and your precious pedal board space is conserved.

And this is no ordinary tuner. It's super fast, lets you tune to 0.1 cent precision and can easily tune a low-B on a bass; something most guitar tuners struggle to do.

The Sonuus tuner for the Sonuus Voluum is available now as a free firmware update (version 1.3.0) available from the Sonuus web site.

A video overview of the new tuner can be found here: [https://youtu.be/u\\_pHIGCKyd4](https://youtu.be/u_pHIGCKyd4)

Sonuus Limited is a music products company, based in the UK. Established to develop and exploit new technologies to create desirable, innovative, products at sensible prices, Sonuus is focused on providing musicians with solutions that are better, simpler, or offer more value than anything else available on the market today.
